ASSEMBLE THIS!

LEGO®

Lego is a fantastic toy for children and adults to play, design and build. Most of us have had some Lego at some point in our lives.

Lego use graphical instructions to tell people how to construct certain models.

These instructions need to be simple and clear - and use no words! Everything is done by graphic communication.

In this small CAD challenge, you get to develop a Lego toy and make assembly instructions that even the professionals would be impressed by!

YOUR BRIEF

1. Assemble your chosen bricks to make a small Lego toy.
2. Create rendered assembly instructions

YOUR BRICKS

The CAD files are in STEP format. You may need to open them in your CAD software and
